

Monthly energy error, 744 × the mean hourly error (P3), on the same late windows. Unit-equal RMS ratio with 95% unit-and-month bootstrap intervals; * resolved in ANKYRA's favour, (+) against it. Computed after scoring. † BDG2 includes the micro-load rule (2.0.1), written after its result was seen; three near-zero meters still dominate its unit means and the next column leaves them out. ‡ Suzhou park: preview, four series.

a ANKYRA's improvement in monthly energy error over each baseline (%)
