

Two checks made with ANKYRA 2.0.1 frozen. a: ten populations re-scored with Chronos-2 supplying the foundation forecasts and nothing re-selected (all windows). b, c: one scoring on HKUST campus incomer meters, never read before (134 windows, 30 effective units). 95% unit-and-month intervals; filled = interval excludes zero; diamonds = borderline (the interval ends at zero and the reading changes with the bootstrap seed). The per-unit ridge is scored on 123 windows.

a Anchoring gain with either foundation model

b HKUST: hourly error

c HKUST: monthly energy error
